

Additional Note for Stompbox Users

- After receiving valuable feedback from customers on Ebay we have now included a rubber strip with the Stompbox.
- The purpose of this rubber strip is to take away the higher popping sound when the Stompbox is used in conjunction with hard soled footwear.
- Cut the rubber strip to suit or simply position the rubber strip on the Stompbox where you are most likely to tap it with your foot.
- Remove the adhesive strip and stick down firmly in the position desired.
- The adhesive strip can be removed at any time if no longer required.
- This is only an optional extra for Stompbox users and is not required to use the Stompbox. I personally do not need to use a rubber strip because I used soft soled shoes and gym shoes when playing the stomp box, however if you are using chunky boots, cowboy boots or flat soled shoes this rubber strip is ideal to enhance the stompbox's performance.
- Refer to the below diagram for ideal placement of the rubber strip.
